Notice:
In case of part numbers fitting on more than one car brand, the priority is given to one car brand rather than to another one(for instance: priority to Volkswagen against Seat).

This also applies to the single car models.

Remarque:
Dans le cas où une référence concerne plusieurs marques de véhicules, la priorité est donné au constructeur (par exemple : priorité est donnée à Volkswagen plutôt qu'à Seat).

La même remarque s'applique pour les modèles de véhicules.

Observación:
En el caso de que una referencia sea aplicable a varias marcas de vehículos, se da la prioridad al constructor (por ejemplo, la prioridad se da a Volkswagen respecto a Seat).

La misma observación se aplica a los modelos de vehículos.

Bemerkung:
Bei Teilenummern welche in Fahrzeugen verschiedener Fabrikaten eingesetzt werden, hat ein Fabrikat Vorrang gegenüber den anderen (zum Beispiel: Volkswagen gegenüber Seat).

Dies trifft auch bei den einzelnen Fahrzeugmodellen zu.

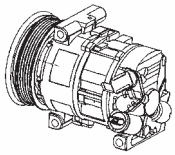

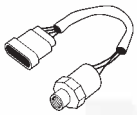

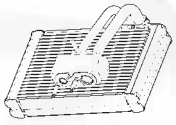

Avvertenza:
Quando un codice prodotto può avere applicazione su vetture di marche diverse, si dà priorità, arbitrariamente, ad un costruttore piuttosto che a un altro (ad es: priorità a Volkswagen su Seat).

Lo stesso vale per il modello di vettura.

THE CLIMATE CONTROL SYSTEM

System layout

The main purpose of a Climate Control System is to maintain the air in the passenger compartment at a comfortable temperature by cooling or heating the air blown into the passenger compartment. Further it will reduce humidity, dust and smell in the passenger compartment.
To perform these operations, the Climate Control System for the automobile generally consists of a heater, cooler (or evaporator), ventilation system, such as a blower and ducts and air purifier.

The 5 main components of a refrigeration cycle

- Compressor
- Condenser
- Receiver Dryer
- Expansion Valve
- Evaporator

The system components are connected to each other with different tubes and hoses.

Operation of a car Climate Control System

a. The Compressor discharges high pressure and high temperature refrigerant in a gaseous state. The refrigerant discharged contains the heat absorbed from the evaporator and the heat created by the Compressor in a discharge stroke. After discharge the refrigerant flows to the condenser.

b. The condenser will condense the gaseous refrigerant into a liquid by exchanging heat with the air passing through the condenser. When the refrigerant is liquefied it flows to the Receiver Dryer.

c. The Receiver Dryer will store the refrigerant until the Evaporator requires it and it will ensure only liquefied refrigerant flows to the evaporator. Secondarily the refrigerant is filtered and dried. After separation of gas and liquid, liquid refrigerant flows to the Expansion Valve.

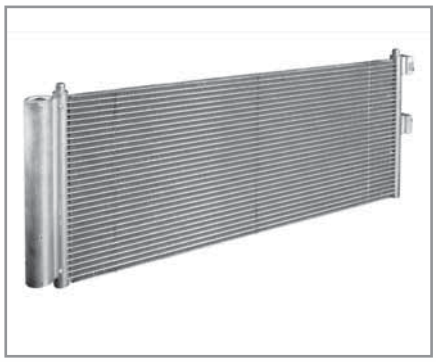

d. The Expansion Valve injects the refrigerant into the Evaporator changing the refrigerant from a high pressure and high temperature liquid into a low pressure and low temperature liquid and gas mixture. The refrigerant flows to the Evaporator.

e. The Evaporator vaporises the low pressure and low temperature refrigerant. When vaporising the refrigerant a high amount of heat is required which it will absorb from the warm air passing through the evaporator. All liquid will change into a gaseous refrigerant and only gaseous refrigerant flows to the Compressor. The process is then repeated again.

f. The system is controlled using a Computer or Amplifier in order to maintain a comfortable interior temperature for driver and passengers. Sensors are used to protect the system against too high or too low refrigerant pressures, frosting of the evaporator and when necessary to protect drive belt.

LE SYSTÈME DE CLIMATISATION

Agencement du système

La climatisation a pour rôle principal de maintenir l'air de l'habitacle à une température agréable en refroidissant ou en chauffant l'air y étant insufflé. Par ailleurs, elle réduit l'humidité, la poussière et les odeurs dans l'habitacle. Pour ce faire, le système de climatisation d'un véhicule comprend généralement un radiateur de chauffage, un refroidisseur (ou évaporateur), un système de ventilation tel qu'un pulseur et des conduits, et un purificateur d'air.

Les 5 principaux éléments d'un cycle de réfrigération

- Compresseur
- Condenseur
- Filtre déshydrateur
- Détendeur
- Evaporateur

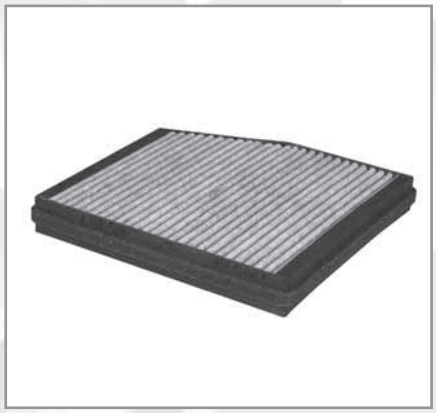

Les éléments du système sont raccordés ensemble par différents tuyaux et flexibles.

Fonctionnement de la climatisation d'une voiture

a. Le compresseur refoule du réfrigérant à haute pression et à température élevée dans un état gazeux. Le réfrigérant refoulé contient la chaleur absorbée par l'évaporateur et la chaleur créée par le compresseur pendant une course de refoulement. Après le refoulement, le réfrigérant s'écoule vers le condenseur.

b. Le condenseur transforme le réfrigérant gazeux en liquide en échangeant sa chaleur avec l'air qui traverse le condenseur. Lorsque le réfrigérant est liquéfié, il s'écoule dans le filtre déshydrateur.

c. Le filtre déshydrateur stocke le réfrigérant jusqu'à ce que l'évaporateur en ait besoin et veille à ce que seul du réfrigérant liquéfié s'écoule vers l'évaporateur. Ensuite, le réfrigérant est filtré et séché. Après la séparation entre le gaz et le liquide, le réfrigérant liquide s'écoule vers le détendeur.

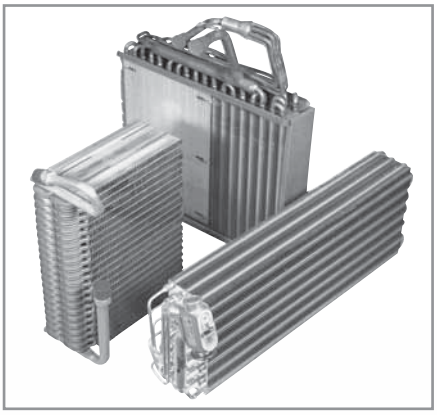

d. Le détendeur injecte le réfrigérant dans l'évaporateur en transformant le réfrigérant d'un liquide à haute pression et à température élevée en un mélange de liquide et de gaz à basse pression et à basse température. Le réfrigérant s'écoule vers l'évaporateur.

e. L'évaporateur vaporise le réfrigérant à basse pression et à basse température. La vaporisation du réfrigérant requiert beaucoup de chaleur absorbée dans l'air chaud traversant l'évaporateur. Tout le liquide se transforme en réfrigérant gazeux et seul ce réfrigérant gazeux s'écoule vers le compresseur. Ce processus est ensuite répété.

f. Le système est commandé par un ordinateur ou un amplificateur afin de maintenir une température ambiante agréable pour le conducteur et les occupants. Des capteurs servent à protéger le système contre des pressions de réfrigérant trop élevées ou trop basses, contre le givrage de l'évaporateur et, au besoin, pour protéger la courroie d'entraînement.

EL SISTEMA DE CLIMATIZACIÓN

Distribución del sistema

El objetivo principal de un Sistema de Climatización es mantener una temperatura agradable en el habitáculo de los pasajeros, enfriando o calentando el aire que se inyecta a dicho habitáculo. Además, reduce la humedad, el polvo y los olores en este espacio. Para efectuar estas operaciones, el Sistema de Climatización del automóvil suele constar de un calentador, un enfriador (o evaporador), un sistema de ventilación (por ejemplo, un ventilador y conductos) y un purificador de aire.

Los 5 componentes principales de un ciclo de refrigeración

- Compresor
- Condensador
- Filtro deshidratante
- Válvula de expansión
- Evaporador

Los componentes del sistema están conectados unos con otros mediante diversos tubos y mangueras.

Operación de un Sistema de Climatización en un vehículo

a. El compresor descarga refrigerante a alta presión y alta temperatura en estado gaseoso. El refrigerante descargado contiene el calor absorbido del evaporador y el calor creado por el compresor en un recorrido de descarga. Después de la descarga, el refrigerante fluye al condensador.

b. El condensador condensa el refrigerante en estado gaseoso convirtiéndolo en estado líquido mediante intercambio de calor con el aire que pasa por el condensador. Una vez licuado el refrigerante, fluye hacia el filtro deshidratante.

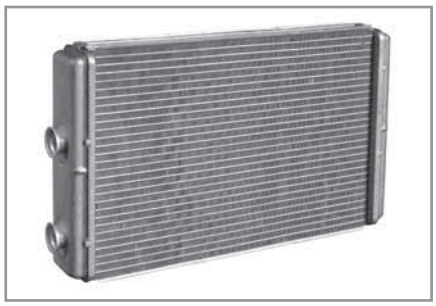

c. El filtro deshidratante almacena el refrigerante hasta que se necesita en el evaporador, y garantiza que solamente fluye refrigerante en estado líquido hacia el evaporador. En una segunda fase, se filtra y seca el refrigerante. Después de la separación de gas y líquido, el refrigerante en estado líquido fluye hacia la válvula de expansión.

d. La válvula de expansión inyecta el refrigerante en el evaporador convirtiendo el refrigerante líquido a alta presión y alta temperatura en una mezcla de líquido y gas a baja presión y baja temperatura. El refrigerante fluye hacia el evaporador.

e. El evaporador vaporiza el refrigerante a baja presión y baja temperatura. Para vaporizar el refrigerante, se requiere una elevada cantidad de calor, que se absorbe del aire caliente que pasa por el evaporador. Todo el líquido pasa a refrigerante en estado gaseoso y solamente en dicho estado fluye hacia el compresor. Después, el proceso se repite.

f. El sistema se controla mediante un ordenador o un amplificador, con el fin de mantener una temperatura agradable en el interior para el conductor y los pasajeros. Se utilizan sensores para proteger el sistema de presiones demasiado elevadas o demasiado bajas del refrigerante o de la congelación del evaporador y, en caso necesario, para proteger la correa de la transmisión.

DAS SYSTEM DER KLIMAANLAGE

Symmetrisches Layout

Der Hauptzweck einer Klimaanlage besteht darin, die Luft im PKW-Innenraum durch Kühlung oder Erwärmung auf einer komfortablen Temperatur zu halten. Außerdem verringert sie Feuchtigkeit, Staub und Gerüche im PKW-Innenraum. Zur Durchführung dieser Funktionsvorgänge besteht die Klimaanlage des Fahrzeugs im allgemeinen aus einer Heizung, einer Kühlvorrichtung (oder Verdampfer), einem Ventilationssystem, z. B. einem Gebläse und Luftkanälen, und einem Luftreiniger.

Die 5 Hauptkomponenten eines Kühlzyklus

- Kompressor
- Kondensator
- Trockner
- Expansionsventil
- Verdampfer

Die Systemkomponenten werden über unterschiedliche Rohrleitungen und Schläuche miteinander verbunden.

Betrieb einer KFZ-Klimaanlage

a. Der Kompressor fördert Kühlmittel im gasförmigen Zustand unter hohem Druck und mit hoher Temperatur. Das geförderte Kühlmittel enthält die vom Verdampfer absorbierte Hitze sowie die vom Kompressor in einem Fördertakt generierte Hitze. Nach Förderung strömt das Kühlmittel zum Kondensator.

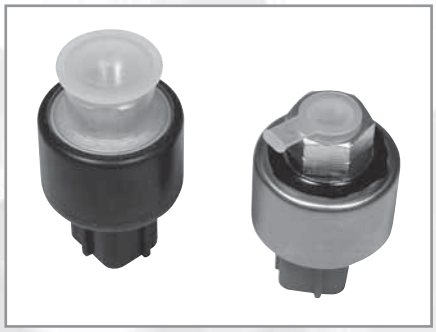

b. Der Kondensator kondensiert das gasförmige Kühlmittel zu einer Flüssigkeit, indem Wärme mit der durch den Kondensator strömenden Luft getauscht wird. Nachdem das Kühlmittel verflüssigt ist, strömt es zum Trockner.

c. Der Trockner speichert das Kühlmittel, bis dieses vom Verdampfer benötigt wird, und gewährleistet, dass nur verflüssigtes Kühlmittel zum Verdampfer strömt. Sekundär wird das Kühlmittel gefiltert und getrocknet. Anschliessend strömt es zum Expansionsventil.

d. Das Expansionsventil spritzt das Kühlmittel in den Verdampfer ein; das Kühlmittel wird von einer Flüssigkeit mit hohem Druck und hoher Temperatur zu einer Mischung aus Flüssigkeit und Gas mit niedrigem Druck und niedriger Temperatur. Es strömt weiter zum Verdampfer.

e. Das Kühlmittel mit niedrigem Druck und niedriger Temperatur wird vom Verdampfer verdampft. Bei der Verdampfung des Kühlmittels ist eine große Menge von Wärme erforderlich, die es aus der durch den Verdampfer strömenden warmen Luft entnimmt. Alle Flüssigkeit wird zu einem gasförmigen Kühlmittel und nur gasförmiges Kühlmittel strömt zum Kompressor. Der Prozess wird dann wiederholt.

f. Das System wird mit einem Computer oder Steuergerät gesteuert, um für Fahrer und Mitfahrer eine komfortable Innenraumtemperatur aufrechtzuerhalten. Mit Sensoren wird das System gegen zu hohe oder zu niedrige Kühlmitteldrücke und Einfrieren des Verdampfers geschützt; wenn erforderlich, werden auch Sensoren zum Schutz des Antriebsriemens eingesetzt.

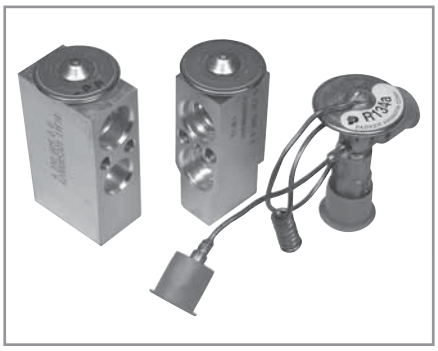

I

IL SISTEMA DI CLIMATIZZAZIONE

Disposizione del sistema

Lo scopo principale di un Sistema di Climatizzazione è quello di mantenere l'aria dell'abitacolo ad una temperatura confortevole mediante la refrigerazione o il riscaldamento dell'aria immessa nell'abitacolo stesso. Il sistema riduce inoltre il tasso d'umidità e la presenza di polveri e odori nell'abitacolo. Per eseguire queste operazioni, il Sistema di Climatizzazione di un autoveicolo consiste in genere in un riscaldatore, un refrigeratore (o evaporatore), un sistema di ventilazione, composto da un soffiante e dai suoi condotti, e un purificatore d'aria.

I cinque componenti principali di un ciclo di refrigerazione

- Compressore
- Condensatore
- Filtro disidratatore
- Valvola d'espansione
- Evaporatore

Gli elementi del sistema sono collegati l'uno all'altro tramite differenti tubi rigidi e flessibili.

Funzionamento di un Sistema di Climatizzazione per veicoli

a. Il compressore scarica il liquido refrigerante ad alta pressione e alta temperatura in uno stato gassoso. Il refrigerante così scaricato contiene il calore assorbito dall'evaporatore ed il calore creato dal compressore in una fase di scarico. Dopo lo scarico, il refrigerante fluisce verso il condensatore.

b. Il condensatore concentra il refrigerante gassoso in uno stato liquido, scambiando il calore con l'aria che transita attraverso il condensatore. Una volta che il refrigerante è liquefatto, esso fluisce attraverso il filtro disidratatore.

c. Il filtro disidratatore accoglierà il refrigerante fino a che l'evaporatore non lo richieda, e si assicurerà che soltanto il refrigerante liquefatto fluisca verso l'evaporatore. Secondariamente, il refrigerante viene filtrato ed essiccato. Dopo la separazione di gas e liquido, il refrigerante liquido fluisce verso la valvola d'espansione.

d. La valvola d'espansione inietta il refrigerante nell'evaporatore, cambiandolo da liquido ad alta pressione e alta temperatura in miscela di liquido a bassa pressione e bassa temperatura e gas. Il refrigerante fluisce allora verso l'evaporatore.

e. L'evaporatore vaporizza il refrigerante a bassa pressione e bassa temperatura. Per la vaporizzazione del refrigerante è richiesta un'elevata quantità di calore, che verrà assorbito dall'aria calda che transita attraverso l'evaporatore. Tutto il liquido verrà scambiato in refrigerante gassoso, e soltanto tale refrigerante gassoso fluirà verso il compressore. Il processo verrà quindi ripetuto.

f. Il sistema è controllato per mezzo di un computer o di un amplificatore, al fine di mantenere una temperatura interna piacevole per il conduttore ed i passeggeri del veicolo. Si impiegano sensori per proteggere il sistema da pressioni del refrigerante troppo elevate o troppo basse, la brinatura dell'evaporatore e, laddove necessario, per proteggere la cinghia di trasmissione.
