Adalbert Wendt
Managing Director

Josef Schumacher
Workshop Manager

The founder of the company, Mr. **Adalbert Wendt**, is a skilled toolmaker and ran a pipe construction company until 1983.

He particularly liked fast motorcycles at that time. This hobby led to the formation of a racing team in 1983, Fa. RAU Motorradtechnik.

This team was responsible for the development of motorcycles which started internationally in the Superbike class.

In 1986 the company quarters and workshops had to be relocated.

During this move a locksmith was called to open a door at the new business premises. The door had to be opened by force and the result of a destroyed door led the fiddler and crafter Adalbert Wendt to think about a better solution.

All enquiries to other locksmiths showed that professionally manufactured and thought out opening tools were not available in Europe or were only designed for the American Market.

In autumn 1986 the first opening tool was already patented. This tool, which is known under the name **ZIEH-FIX®**, equally caused excitement and was a sensation.

This tool laid the foundation of the company A. Wendt Sicherheits- und Aufsperrtechnik GmbH.

Meanwhile Adalbert Wendt is owner of numerous patents and registered designs.

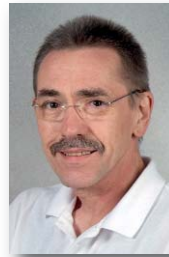

Europe's No. 1 offers one of the most extensive programs of opening tools. It is an assortment of over 1,500 articles and contains apart of own products selected tools of the world's most important manufacturers. Even for small things a huge selection – that is the strength of Wendt.

Quality tools are crucial for excellent work, safe handling and more working comfort.

The technicians of Wendt combine technical know-how, first-class knowledge and innovative strength. They create high-quality tools based on innovative ideas and developed up to readiness for production.

Since quality is a high priority for the company each of the own products passes through a severe quality control from design to delivery.

CAD, high-quality raw materials, state of the art production technologies, careful end control and tough practical tests – Wendt will vouch for it.

Theodor Schürmann
Chief Instructor

Theodor Schürmann, a retired police officer and former member of a German Special Force is the Chief Instructor of Wendt.

He has concentrated on the special needs of police forces due to his background knowledge and so he is a trainer who is in high demand for the special needs of these forces.

Frederic Versteeg RSE is a member of the Dutch corporation "Register Security Expert" and he is qualified for the addition "RSE" with his name.

In 1981 was Versteeg as the Royal Sergeant Major of a Dutch Armoured Engineer Company posted at the Bergen Hohne barracks in Germany. In this job he had a lot of work to do with safes and combination locks and ever since his interest in safe technic was born.

In 2000, after many rambles and a lot of military jobs, he has founded the first Lockmaster group of the Dutch Land Forces. Now he is as a Major placed on the retired list still the grand old man of this group and he trains the Lockmaster specialist of the Dutch Army.

He is the safe opener asked by private-, firm- and Police-organisations in his own service VERSEC Technics. He is instructor of several security courses and is also a master in stamina tests of materials at the "Hague's High school".

J. L. Garcia de Vicuña
Managing Director

The owner **José Luis García de Vicuña** trades with opening tools in Spain and has been a contractual partner of A.Wendt GmbH for 15 years.

The professional competence of the Vicuña family in the area of lock-and opening techniques can be traced back over generations.

José Luis García de Vicuña is responsible for the development of numerous special tools for the manipulation of tubular-, chubb-, safe-and vault systems.

He has trained locksmiths and numerous special European police forces in his training school in Zaragoza.

José Luis García de Vicuña also organises trainings for the safe area and impression technique.

Josef Matyjas

After his 4-year training at A. Wendt GmbH **Josef Matyjas** founded his own business in Breslau (now Wrocław), Poland and has been a contractual partner of A. Wendt GmbH since then.

For many years the main focus has been the Eastern European locking systems, disc-locking systems in vehicles and safes as well as the development of innovative tools for opening these locks.

Josef and his son **Radec Matyjas** learned their trade starting from the bottom and have an extensive "Know-how". They have become acknowledged experts for vehicle- and safe-openings.

ANKO®

Igor Ansevics
Managing Director

The company ANKO was founded in 1991 by **Igor Ansevics** and he started to work with with three coworkers. Already after a few years ANKO was market leader in Latvia.

1996 ANKO opened the largest showroom for safety and security products in Latvia and the trade with key blanks started.

Vladimir Ansevics

The subsidiary company "ANKO Project" was founded in 2001. Within the following years ANKO Project installed with 20 coworkers conducted by **Vladimir Ansevics** master key systems and fittings in more than 200 objects in Latvia. So they took 50% of the Latvian market.

Igor Ansevics is also the president of the "Latvian Locksmith Brotherhood" (LLB).

Ayhan Selvi
Managing Director

Ayhan Selvi inherited the trade, because his grandfather already was a shoemaker.

After his vocational training as a car mechanic Ayhan Selvi worked from 1989 to 1996 in the well-known key-cutting service company Mister Minit. There he learned the shoe- and key-cutting service trade.

In 1996 Ayhan Selvi set up his own business as a locksmith. At that time his tools were limited to drills and milling cutters. During extensive enquiries for innovative and non-conventional methods he got in touch with A.Wendt GmbH.

Ayhan Selvi visited an intensive course for applied opening techniques at A.Wendt GmbH and so he finally found for what he was looking a long time, innovative opening methods as well as necessary tools and accessories. In 2001 Ayhan Selvi expanded his company and ASEL AG was set up.

Meanwhile seven branches belong to ASEL AG, in which services for safety and security technology and key-cutting are offered.

ASEL AG also trades with key machines, key blanks, key-cutting service accessories and has the sole agency in Switzerland for the tools of A. Wendt GmbH.

LOCKMASTERS®
I N C O R P O R A T E D

Mark C. Miller
President

Lockmasters, Inc., was established in 1955, in Rochester, NY, by Harry C. Miller, James Taylor and Leonard Singer.

Lockmasters offered correspondence courses in lock manipulation and safe lock servicing. These proved so successful that a

Brian Lamb
Sales Manager

"hands-on" residence school was created. Then in 1983, under the sole ownership of J. Clayton Miller, son of Harry C. Miller, Lockmasters expanded the base of operations to include a tool and equipment division. The goal of this new division was to be a quality "single source" supplier for all parts, tools and equipment. In addition to education, tools and customer service, Lockmasters has always been and continues to be at the forefront of innovative research and development.

In 2005, Clay's son, **Mark C. Miller** purchased Lockmasters, Inc., tool and equipment division, located in Nicholasville, Kentucky with the intent on continuing a family tradition of excellent customer service from qualified industry experts.

Since 1955, **LSI** has pursued the goal of being the security industry's leading educational facility. For more than 50 years, LSI has trained personnel from US government agencies, the United States military, and many Fortune 500 companies. The training is also available to every level of law enforcement, as well as small business' and private organizations.

J. Clayton Miller
Chairman

LSI is also fully approved by the General Services Administration as a Certified Training Facility for the GSA CERTIFIED Safe & vault Technician Course.

Since 2004, LSI welcomed their students to its newly renovated 22,000 sq. ft. state-of-the-art security training facility.

The Security Division instructors are former federal or state level senior security and law enforcement professionals. Their

experience ranges from U.S. Secret Service, the National Security Agency (NSA), the General Services Administration (GSA) Law Enforcement and Security, the Department of Defense, the Postal Inspection Service and Federal Protective Services. The Technical Division instructors have up to decades of field experience, which is vital for learning our intense "hands-on" instruction. They are authors, inventors and award winning instructors that have trained LSI students worldwide.

Fun Sport "Lockpicking"

**Specialists for the

and impressing**

Julian Hardt

Julian Hardt, one of only two hail airmen in Germany, is seasonal worker. From April to October he is standing by, in order to avoid larger crop damage.

The icy hail can literally smash agricultural existences. Owing to a refined technology it can often be prevented.

"Actually I am a rainmaker", the airman explains. Because the silver iodide, which he sprays with his small, particularly equipped machine, causes the forming of very small hailstones - which in the most favorable case melts on the way down - instead of destructive large chunks.

eMail: lockmaster@online.de

Oliver Diederichsen owns the company "Tresoröffnung.de". Since 1997 he is busy in locks, security and opening techniques. He is also author of the book "Impressioning - analytic view, technical procedure, forensic report".

Thomas Dumbovic
Managing Director

EED which has been working in the field of surveillance electronics since its foundation in 2003, has made a name for itself in areas where innovation and specifically designed products are required. Wherever commercially available products cannot be used EED will step in. EED is the right address for specification, development, design of a prototyp up to manufacturing middle-sized series and construction of antennae, front panels or product/case design.

The company owner **Thomas Dumbovic** developed his first transmitter of voice from parts of old devices at the young age of 13. In 1992 he worked in an electronic shop, but developed and built several electronic devices as a hobby during his sparetime. In 1994 he started working as a technician in Germany's first spy shop. In 1998 the company "Autoteleshop & Co. KG" was founded and Mr. Dumbovic became a partner responsible for the development of the electronic devices. He left this company in 2003 and established Elektronik Entwicklung Dumbovic as a sole owner.

Bart D'hondt
Managing Director

CAMINOS is a new company specialized in technical observations, integration and camouflage for governmental agencies, security world and every company which has a serious security problem.

The experiences of CaminoS:
Years of operations inside the Special Police Forces, years of experience in camouflage and integration, high level of technical and practical background and international operations and training.

The specialities of CaminoS are:
Camouflage, Integration and Operational Support
Specialized trainings for low noise drilling and concealment techniques.

The concept:
The concept pushes back the limits of the common security possibilities by offering dedicated technical solutions but also and mainly by offering services and specialized, unique and customized trainings.

The equipment:
CaminoS offers a complete solution. We deliver high-end dedicated equipment, training and operational support. Working with CaminoS offers you access to dedicated subject matter specialists.

Operational support:
CaminoS will explain you how and why we can execute or assist you during a special operation and how we'll find a solution to your specific problem.

The trainings:
The trainings are exclusively offered to governmental agencies. Thanks to this you'll be able to execute such operations by yourself. Indeed, our basics and specialized modules will teach you how to create a multifunctional workshop, how to prepare and execute integration and camouflage on the field, how to recruit your technical team and how to buy specific tools and consumables.

Conclusion:
CaminoS job starts when standard observation and protection fails.

Marc Weber Tobias
Investigative Attorney

Marc Weber Tobias is an investigative attorney and a physical security expert, living in the United States.

He was trained as both a lawyer and criminal investigator and has worked for the past thirty-five years in the investigation of civil and criminal cases as well as consulting with many clients regarding security issues, product design, and defective security engineering in locks.

He has been employed by government agencies and private clients throughout the world to analyze security systems for bypass capabilities. Marc holds three United States Patents related to the bypass of locks and security systems, and is the author of numerous magazine articles, six books and an eighteen-volume multimedia edition of Locks, Safes, and Security, a primary reference on the subject.

He is one of the directors of Security Laboratories, a recently established testing lab in the United that has been retained by lock and security hardware manufacturers in Europe, the Middle East, and the United States to determine "real world" techniques of bypassing high security locks which are often not discovered by traditional testing laboratories. Marc is also on the Standards Technical Panel for Underwriters Laboratories in the U.S. dealing with locks, safes, alarm systems, and related security devices.

Marc Tobias has lectured extensively throughout the world at security conferences and to law enforcement agencies and University Forensic programs, and is a member of many professional organizations, including ASIS and ALOA in the United States. His website is www.security.org, and his blog is <http://in.security.org>.

Tobias Bluzmanis

Tobias Bluzmanis lives in Miami, Florida, and is also a Director of Security Laboratories.

Originally from Caracas, Venezuela, he has worked as a professional locksmith for the past twenty-five years, and was the co-author of the 2008 book "Open in Thirty Seconds" which detailed the development of bypass techniques for one of the most secure locks in the United States.

Toby, Marc Tobias, and other colleagues are responsible for developing bypass techniques for high security locks and security systems, and consult with major lock companies to insure the proper design and security engineering for their products.

Manfred Göth
Managing Director

Between 1971 and 1993 **Manfred Göth** was employed by the police in Hessen, where he worked most of the time for the Hessen Criminal Investigation Department in Wiesbaden in the area of forensic science.

In 1993 he founded his own forensic testing laboratory.

Here he examines objects following a break-in or a fire. He examines properties for possible evidence of a break-in to find out whether persons unknown have entered the property without using a key. During this process he examines all the doors and windows along with the safety devices present there.

In his laboratory he furthermore examines locks and locking cylinders as well as the corresponding keys to find out whether they have been opened using tools other than the correct keys. Keys are carefully examined to find out if they have been used to make copies.

Manfred Göth is also an expert in discovering whether vehicles have been stolen without using the correct key. He will also examine vehicle keys to find out whether they are originals or copies.

Reconstruction of scenes of crime or damage to establish and verify the course of events also forms part of Manfred Göth's activities.

With the equipment in his laboratory Manfred Göth can analyse materials, light bulbs or animal hair and prepare forensic expert reports.

Based on his expert knowledge, Manfred Göth can provide advice on how to protect immovable and movable properties and carry out risk assessments.

Manfred Göth gives training to judges, police officers, loss adjusters and other interested persons. Please see Manfred Göth's homepage for further details of his activities and relevant images.

He has lent his assistance to several books as a co-author and wrote the book "Werkzeugspur" (Tool Traces). Using his outstanding expert knowledge he has furthermore participated in a great number of publications and television reports.

Courses and Seminars

Internationally renowned specialists from within our European Lockmaster Group show the latest techniques for the professional opening of doors in the domestic area, vehicle openings as well as safe- and vault locks. Covered are basics, methods and tools.

Opening of closed doors.
